OBJECTIVE

Analytical IT student (2026) with a strong foundation in SQL and Python. Experienced in building automated ETL pipelines and executing data analytics simulations to solve complex business problems. Seeking to leverage my technical skills in a challenging Data Engineering role

PROFESSIONAL EXPERIENCE

Deloitte Australia (via Forage), Data Analytics Virtual Intern 02/2026 – 02/2026

- Forensic Data Analysis: Analyzed global compensation datasets using SQL to identify and resolve pay disparities.
- Data Modeling: Built complex Excel logic to automate equality scoring for 10,000+ records.
- Visualization: Designed a Tableau dashboard to transform raw data into actionable business trends.
- Reporting: Delivered structured technical insights to stakeholders for executive decision-making.

EDUCATION

BTech - Information Technology, Karpagam Institute of Technology. 11/2022 – 05/2026 | Coimbatore

TECHNICAL SKILLS

Data & BI	Technical	AI Engineering	Cybersecurity
Business Intelligence, Data Modeling, SQL, Tableau, Power BI, Advanced Excel	Python, Java, MySQL, Linux/CLI, Git, Technical Documentation	GenAI Tools: LangChain, ChromaDB, RAG Architecture, LLM Evaluation, Prompt Optimization.	Web & Mobile Pentesting (OWASP Top 10), Network Security, Burp Suite, Vulnerability Assessment.

PROJECTS

- Spotify Track Feature Analysis**, Tools & Technologies: Python (Pandas, mysql.connector), MySQL, SQL
- Built an automated Python (Pandas) and MySQL ETL pipeline to process and normalise complex track data.
 - Executed advanced SQL queries to analyze correlations between acoustic features (e.g., energy, danceability) and track popularity.
- VisionSEO | AI Multimodal Analysis & Content Generation**
- Engineered a system to convert visual data into SEO text, implementing logic to minimize factual drift and hallucination.
 - Built a validation framework to audit AI outputs against strict SEO guidelines for keyword density and technical accuracy.
 - Conducted side-by-side evaluations and manual annotations of model outputs to optimize prompt engineering strategies.
- AI Hallucination Detection System**
- Engineered a real-time fact-checking tool using Python, Streamlit to detect LLM hallucinations.
 - Implemented Self-Consistency Logic (multi-shot prompting) to cross-reference AI responses and verify factual accuracy.
- Bricks Management & E-Commerce Platform**
- Developed a full-stack portfolio and ordering system for a manufacturing business to streamline offline-to-online transitions.
 - Engineered an automated lead-generation pipeline that forwards real-time order details directly to the business owner's WhatsApp, ensuring immediate response times.
 - Integrated a secure backend to manage product inventory and client data, improving order accuracy and processing speed.

ADDITIONAL SKILLS

- Solved **50+** practical data challenges using **MySQL** and advanced SQL techniques.
- Solved 20+ cybersecurity challenges on Hack The Box, strengthening practical skills in penetration testing and network security
